

IN THE CLAIMS

Please amend the claims as indicated below. A marked-up copy of the pending claims is attached as Exhibit B.

- 8v6  
B' →
1. (AMENDED) A method of treatment of malignant neoplasms, the method comprising:  
injecting a complex preparation comprising alpha-fetoprotein (AFP), a cytotoxic substance,  
and a filler;  
wherein a mass ratio of the AFP to the cytotoxic substance to the filler is 1:(60-100):(50-70).
2. (AMENDED) A complex preparation comprising:  
alpha-fetoprotein (AFP);  
a cytotoxic substance; and  
a filler;  
wherein a mass ratio of the AFP to the cytotoxic substance to the filler is (1-2):(60-100):(50-70).
3. (AMENDED) The complex preparation of claim 2, wherein the cytotoxic substance comprises a polyene antibiotic, the polyene antibiotic being selected from the group consisting of amphotericin B and nystatin.
4. (AMENDED) The complex preparation of claim 2, wherein the filler comprises at least one of a polysaccharide and glucose, the polysaccharide being selected from the group consisting of polyglykine, rheopolyglykine, and dextran.
5. (NEW) The method of claim 1, wherein the cytotoxic substance comprises a polyene antibiotic, the polyene antibiotic being selected from the group consisting of amphotericin B and nystatin.
6. (NEW) The complex preparation of claim 2, wherein the filler comprises at least one of a polysaccharide and glucose, the polysaccharide being selected from the group consisting of polyglykine, rheopolyglykine, and dextran.
7. (NEW) The method of claim 1, further comprising injecting the complex preparation in a course of ten injections once in three days, wherein a single dose comprises 0.07-0.15 mg of the AFP, 4.2-7.0 mg of the cytotoxic substance, and 3.5-5.0 mg of the filler.
